# 1 VARIABLEN

The codebook has been generated by the members of the research data center of the German Centre of Gerontology (FDZ-DZA). This Codebook contains information on all variables of the Dataset German Aging Survey (DEAS): Codebook of the SUF DEAS 2020/21. Berlin: DZA.. For each variable the classification of the variable type, the number of valid answers, the (most frequent) named values and a short overview over central distribution parameters.
The codes -1 to -7 mark missing values (user missings).
All variables were categorized into the groups numeric, categorial or string. A variable was classified as numeric if all answers where elements of real numbers. Variables were counted as categorical if all their values where natural numbers and each distinct value could be matched with a category. A variable was coded as string if it didn't fit in to neither of the other two categories.
For numeric variables the 6 most frequent values a reported, for categorial a maximum of 20 most frequent mentioned answers are given. For string variables, a maximum of the 5 most mentioned answers is displayed.

## 1.1 Sample Data
